Twitch Mini Chat visual guide

Twitch chat + Pokémon Community Game (PCG)
A manual mobile companion

Your first PCG session takes three deliberate steps

01 ADD ACCOUNT

02 OPEN PCG

03 UPDATE & PLAY

Choose a channel

Enter a Twitch channel, complete Twitch Login, then tap the saved account to enter chat.

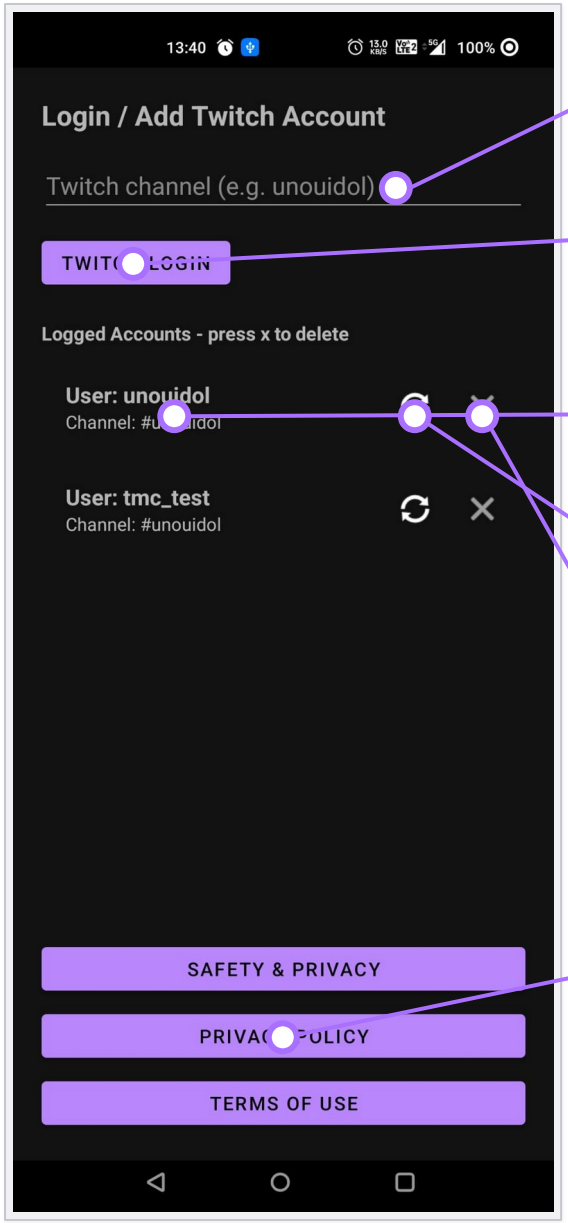

Authenticate PCG

Tap Start PCG. The extension may ask for a separate Twitch sign-in.

Update TMC tool

Update Inventory and Pokédex on their correct tabs, set alerts, then choose every command yourself.

Add accounts once, then reopen them with a tap

Channel for the new account

Enter the Twitch channel this account should open after login.

Twitch Login

Starts Twitch authorization for chat access and adds the account to TMC.

Saved account row

Tap to enter chat. Long-press and drag a row to reorder saved accounts.

Refresh authorization

Reauthorize the same Twitch identity if its session or emote access needs renewal.

Remove account

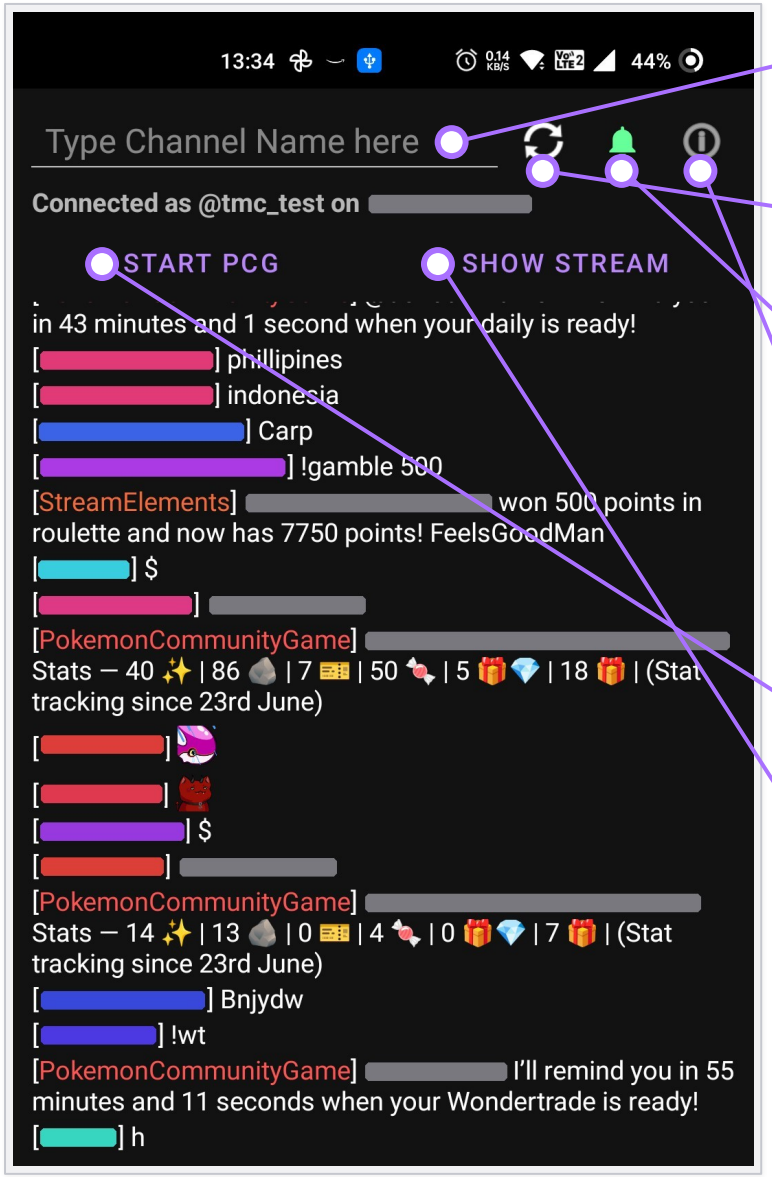

Deletes the selected account from this device after a confirmation step.

Policies and data controls

Open Safety & Privacy, the Privacy Policy, or the Terms of Use at any time.

Accounts can be re-ordered just by dragging them up or down

The chat header controls channel, PCG, stream, and alerts

1

Channel switcher

Type another channel or choose a recent one without changing the logged account.

2

Refresh chat

Runs a manual chat refresh when you want to reconnect or reload the current view.

3

PCG notifications

Opens per-profile spawn modes, event alerts, Most Wanted, sound, and vibration.

4

Safety & Privacy

Opens reporting, blocked users, policies, external-link choices, and data controls.

5

Start PCG

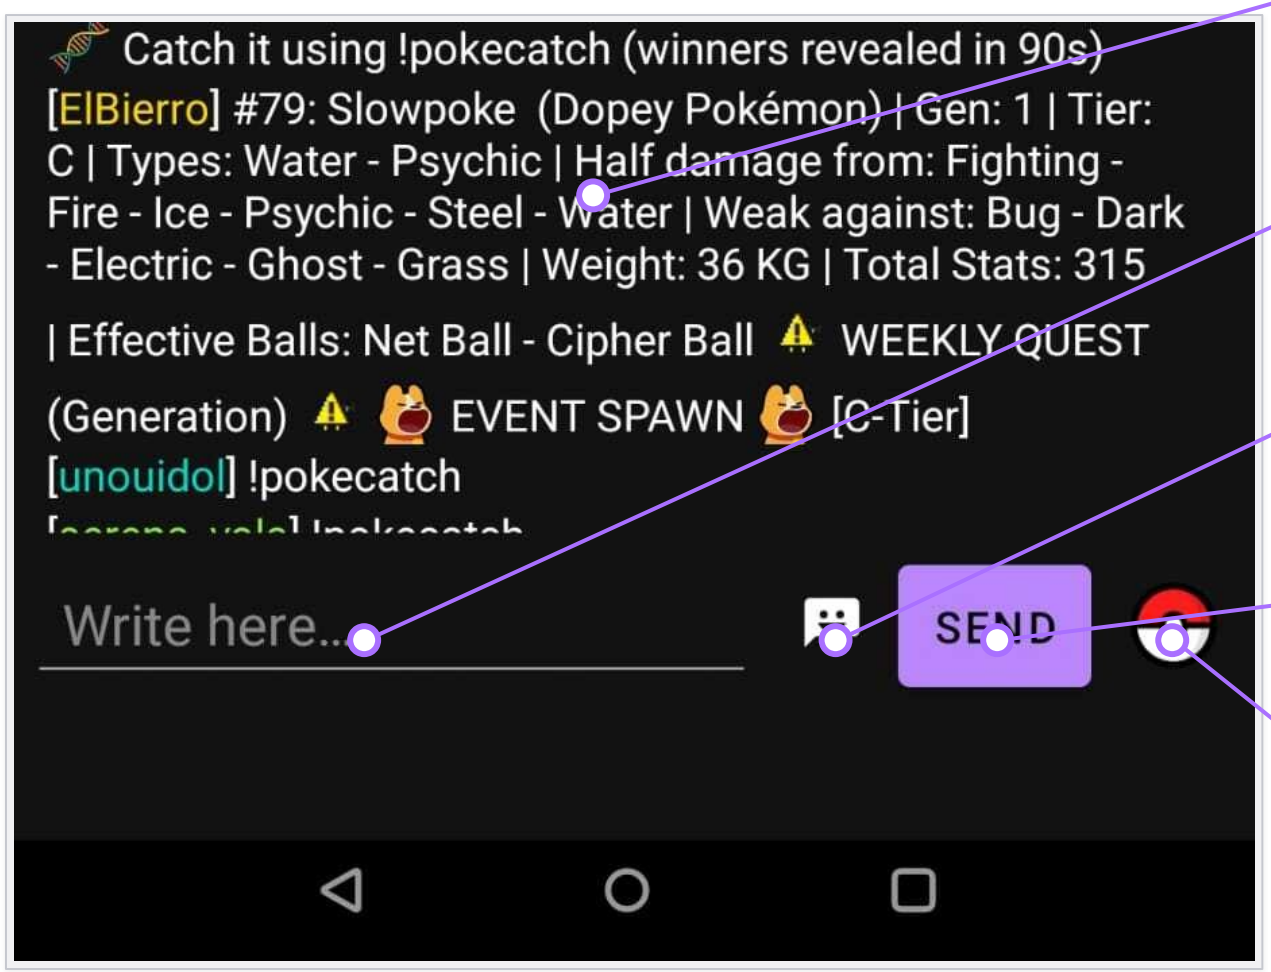

Opens the Pokémon Community Game extension for the current account.

6

Show / Hide stream

Shows or hides the Twitch stream player while keeping chat available. Mute or unmute with the player's own controls.

Messages, emotes, and catch shortcuts stay under your control

Chat timeline & links

Supported web links shown in this area can be opened with your chosen external browser.

Message composer

Type a message or command here. Mention suggestions (@username) appear while you type.

Emote picker

Tap the speech-bubble face icon. Choosing an emote inserts text only; it does not send the emotes, you have to send the message with the button SEND

Send

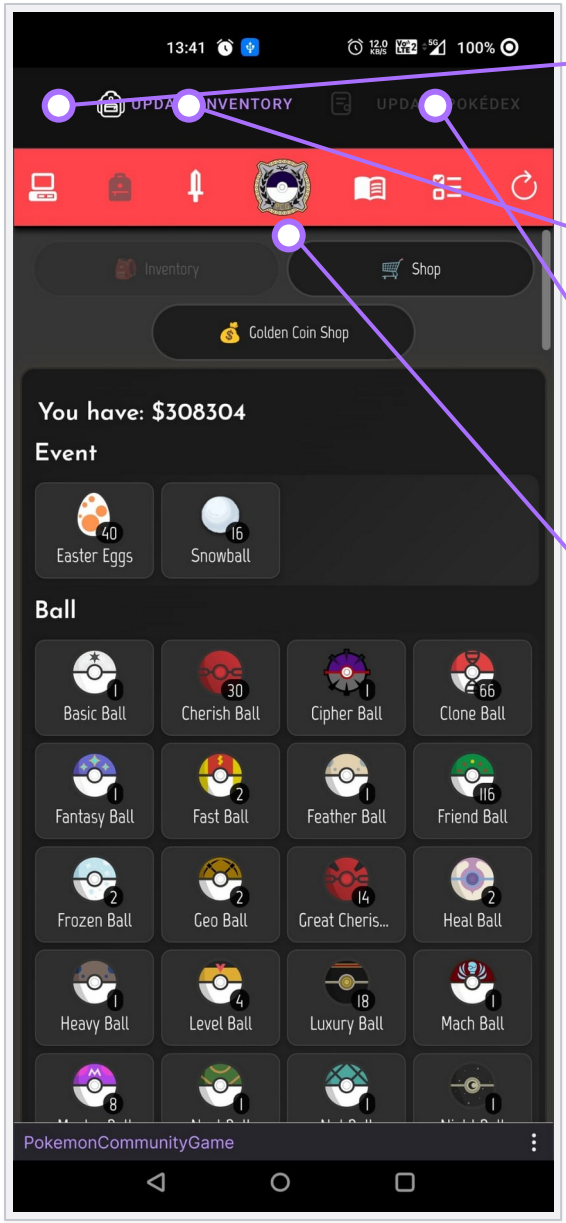

Sends the current composer text as one user-triggered Twitch chat action.

Catch Presets

Tap for quick presets. Long-press the Poké Ball to edit the full preset list.

Manual by design: one deliberate tap produces at most one visible chat or gameplay action.

Open the correct PCG tab before updating local context

1

Refresh PCG

Reloads the extension surface manually if the embedded page is not ready.

2

Update Inventory

Open PCG Inventory first, then tap to record Poké Ball counts for the active profile (the inventory recording works only for English language at the moment). To change the PCG extension language, check point n. 4.

3

Update Pokédex

Open Pokédex with Spawnable only selected filter selected, then tap to record missing entries.

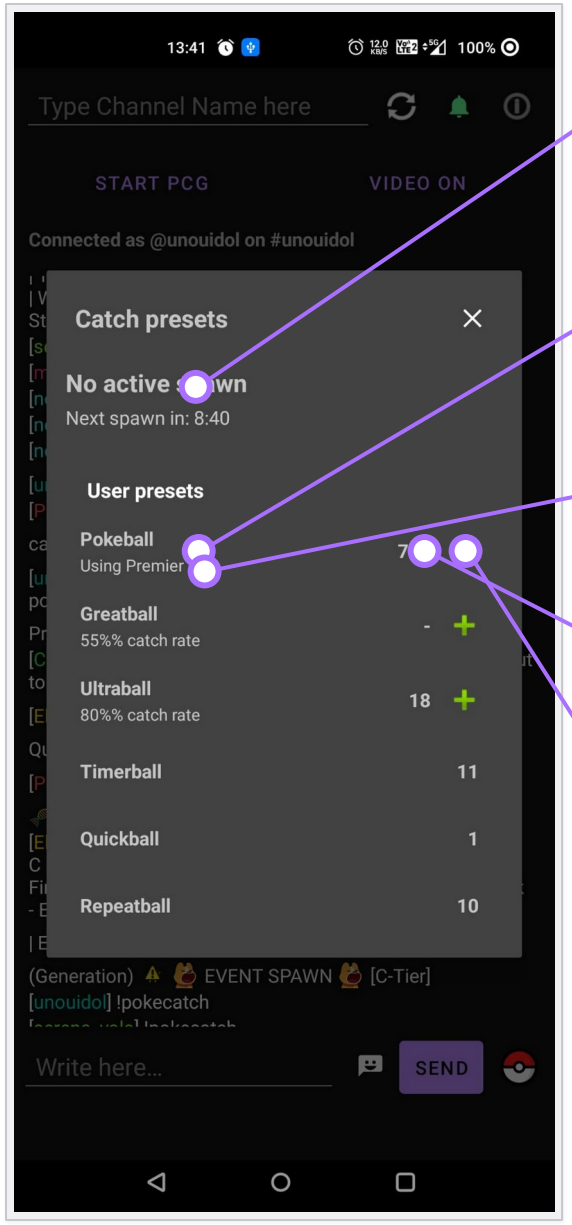

4

PCG navigation

Use the extension tabs normally. Only the update button matching the confirmed tab is enabled. Tap the PCG Logo to open the language selection menu.

Updates are passive snapshots initiated by your tap; TMC does not control the PCG page for you.

Smart Catch explains choices, but every command remains manual

1

Spawn context

Shows the active spawn or the estimated time until the next normal spawn.

2

Tap a preset row

Sends that saved command once and closes the dialog. Nothing is queued or retried automatically.

3

Reason or catch rate

Subtitles explain the current recommendation or the preset's expected role.

4

Available quantity

Counts come from the last inventory snapshot saved for this profile.

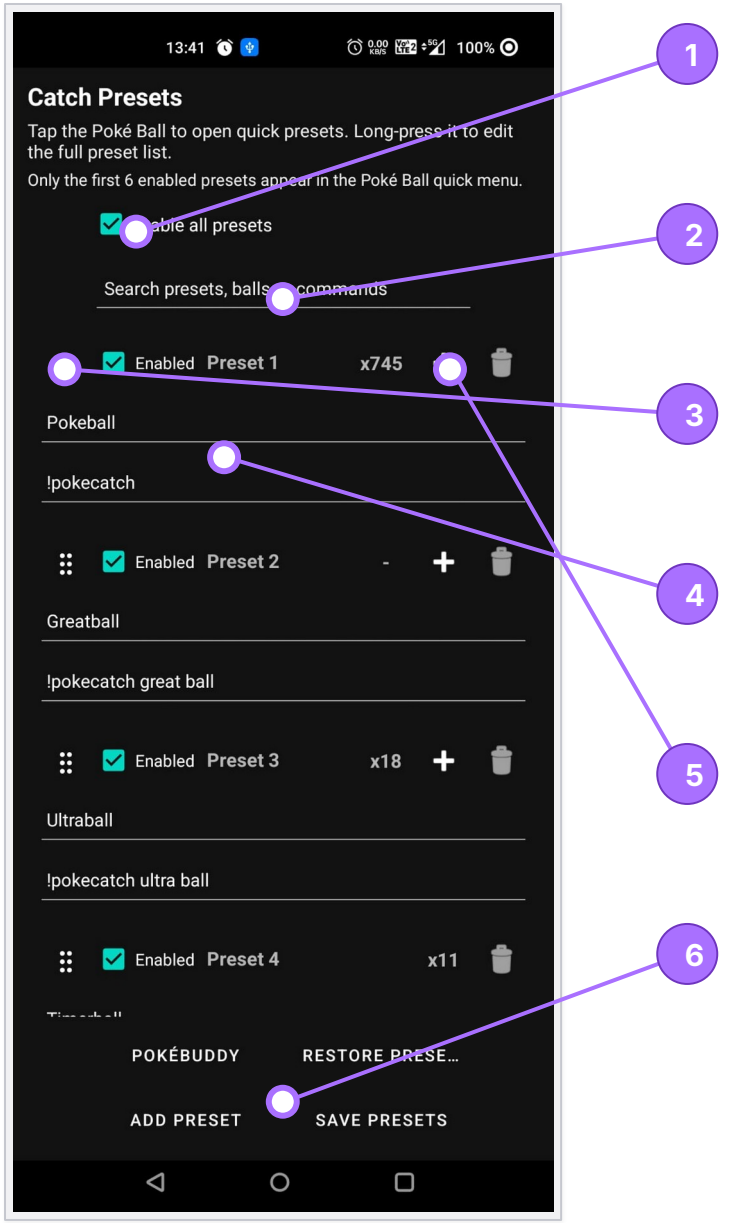

5

Buy shortcut

For supported balls, the green plus opens a quantity dialog for a manual purchase command.

When a spawn is active, Smart Presets can appear above User Presets based on spawn and inventory context.

Long-press the Poké Ball to customize Catch Presets

Enable presets

Use Enable all or the per-row checkbox to control which shortcuts can appear.

Search

Filter by preset label, ball, or command without deleting hidden rows.

Reorder

Drag the dotted handle. Only the first six enabled presets appear in the quick menu.

Edit label and command

Give each shortcut a clear name and the exact command it should send when tapped.

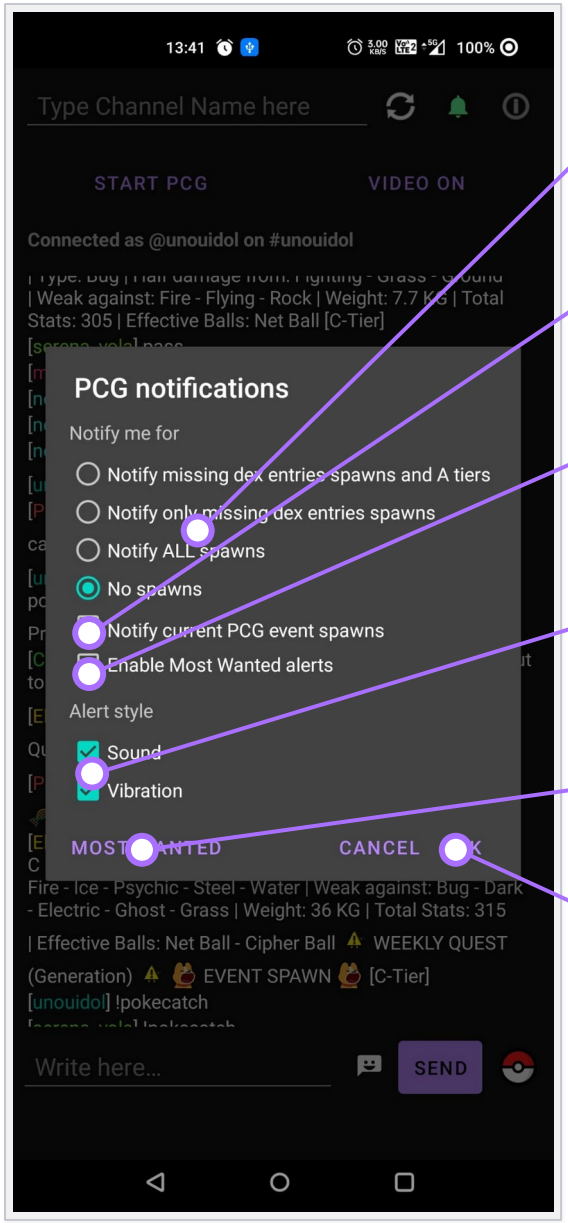

Count, buy, or remove

Review inventory, use + for supported purchases, or remove an unwanted preset.

Utility and save actions

Request Pokébuddy info (and stores them for friend ball suggestions), restore defaults, add a preset, or save the edited list.

Choose exactly which PCG notifications each profile receives

1

Base spawn mode

Choose missing Dex + A tiers, missing Dex only, all spawns, or no standard spawns.

2

Current event spawns

Adds event-spawn alerts independently from the selected base mode.

3

Most Wanted alerts

Enables matches from the separate watchlist saved for this profile.

4

Alert style

Choose whether matching notifications use sound, vibration, both, or neither.

5

Open Most Wanted

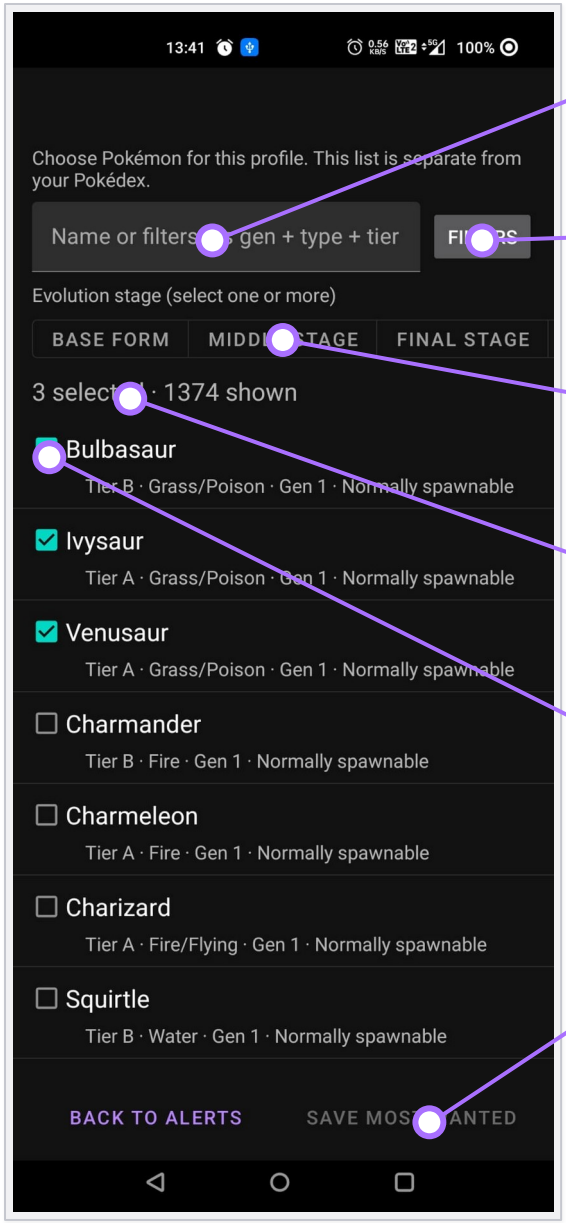

Leaves this dialog and opens the searchable Pokémon watchlist editor.

6

Save settings

Tap OK to apply the selected notification mode and delivery style.

Most Wanted is separate from your Pokédex

1

Search by name or shorthand

Type a Pokémon name or combine supported generation, type, and tier terms.

2

Advanced Filters

Refine tier, type, generation, variants, availability, or special categories. Filters can be combined with evolution stage selectors.

3

Evolution stages

Select one or more stages to combine them in the same catalog filter.

4

Selection count

Shows how many Pokémon are selected and how many match the current filters.

5

Build the watchlist

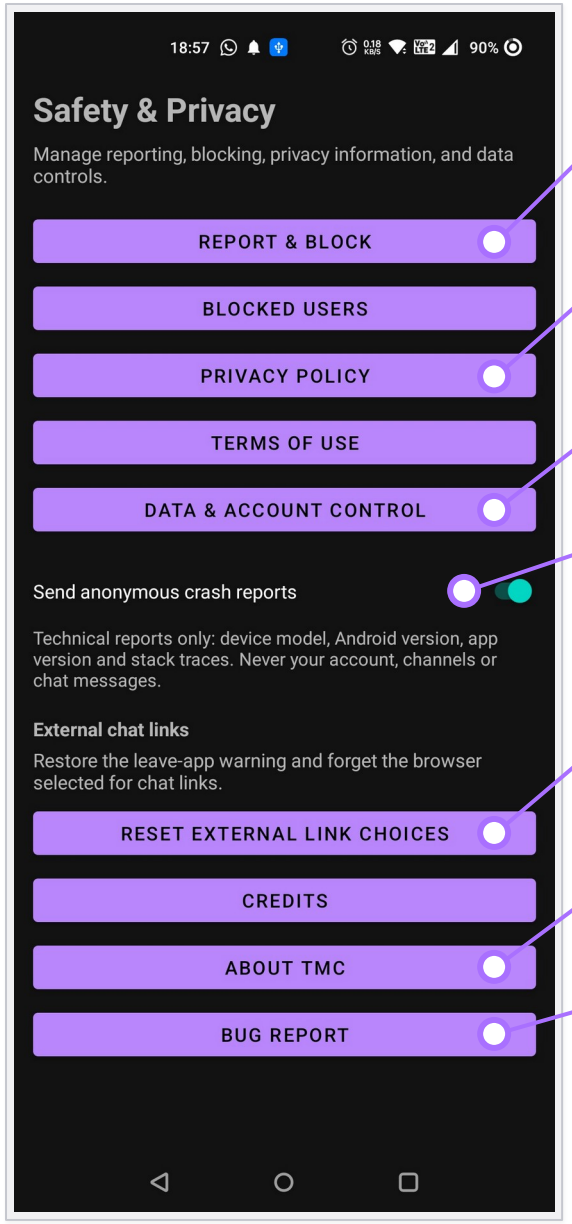

Check or uncheck Pokémon. The choices belong to the current PCG profile.

6

Save Most Wanted

Stores the list for this profile; Back to Alerts returns to notification settings.

Safety, privacy, and data controls remain easy to reach

1

Report & Block, Blocked Users

Hide or report unwanted chat users, and review or restore the ones you have hidden.

2

Policies

Read the Privacy Policy and Terms of Use from inside the app.

3

Data & Account Control

Manage local resets and account/server-data deletion options.

4

Anonymous crash reports

Technical reports only, never your account or chat messages. Switch them on or off here.

5

External-link choices

Restore the leave-app warning and forget the browser selected for chat links.

6

About TMC

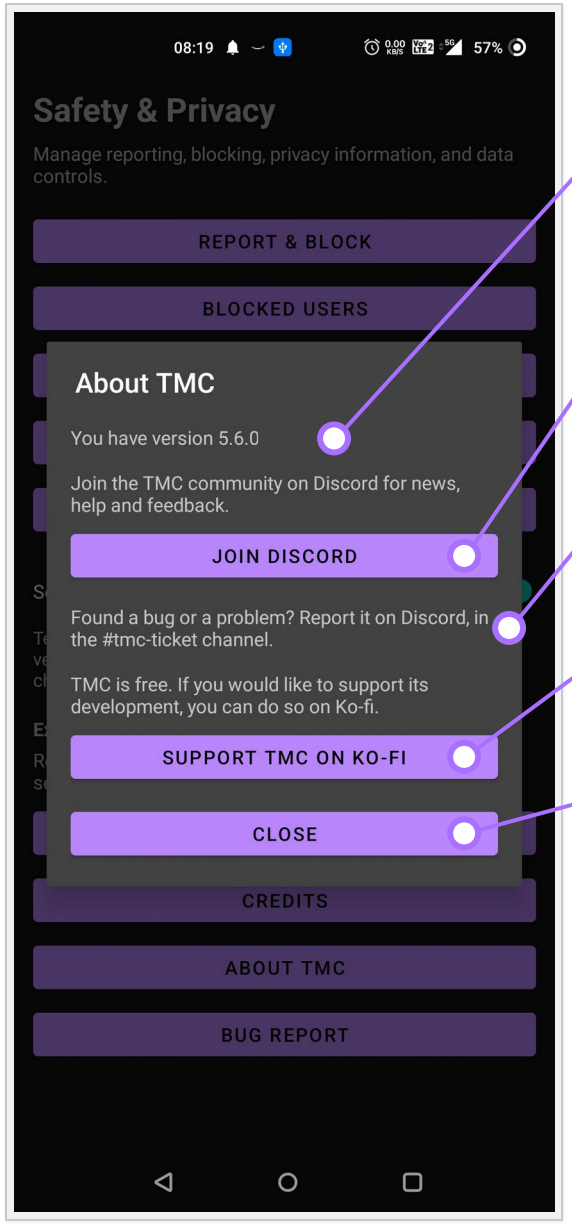

Your version and the Discord and Ko-fi links. Credits, above it, lists third-party components.

7

Bug report

Explains how to report a problem on the TMC Discord server, in the #tmc-ticket channel.

About TMC keeps the community links one tap away

Your version

The version of TMC installed on this phone.

Join Discord

Opens the TMC Discord server for news, help and feedback.

Where to report a bug

Problems are reported on Discord, in the #tmc-ticket channel. Bug report, in Safety & Privacy, says how.

Support TMC on Ko-fi

TMC is free. This opens the Ko-fi page if you would like to support its development.

Close

Returns to Safety & Privacy. The same page greets you the first time you open TMC and once after each update.

Update notice

At most once a day TMC checks GitHub for a newer version. When there is one, it tells you once, and Download update opens the new APK in your browser. TMC never installs anything by itself.
